GreenNest – Online Nursery & Gardening Services Platform

Detailed guide and project requirements for the GreenNest – Online Nursery & Gardening Services Platform analysis.

Context:

With increasing interest in home gardening, indoor plants, and sustainable living, users often face difficulty in finding quality plants, gardening supplies, and skilled gardeners in one place. Nursery visits are time-consuming, and reliable gardeners are usually found through informal references.

This platform aims to provide a centralized digital solution where users can purchase plants and gardening products and book verified gardeners for home gardening and maintenance services.

Problem Statement

Current gardening and nursery services face several issues:

- Limited local nursery availability
- Lack of online purchasing options for plants
- Difficulty in finding reliable and verified gardeners
- No transparency in pricing and service quality
- Manual coordination through phone calls

Functional Requirements

User (Customer) Features

- User registration & login
- Browse and search products:
 - Plants (indoor, outdoor, flowering)
 - Seeds
 - Pots & planters
 - Gardening tools
- Product filters:
 - Plant type
 - Price
 - Indoor / Outdoor
- View product details (images, care instructions)
- Add to cart and place orders
- Book gardener services:
 - Home gardening
 - Lawn maintenance
 - Plant care & pruning
- Select date & time for service
- Order & service history
- Notifications and updates

Nursery / Gardener Features

- Registration & verification
- Manage product listings:
 - Pricing
 - Stock availability
- Service management:
 - Available slots
 - Service pricing
- Accept or reject service bookings
- View orders and service requests
- Earnings and booking reports

Admin Features

- Approve nurseries and gardeners
- Manage categories and products
- Monitor orders and service bookings
- Handle complaints and disputes
- Platform analytics and reports

Primary Objectives

- ✓ • Enable users to buy plants and gardening products online
- ✓ • Provide access to verified gardeners for home services
- ✓ • Digitize nursery inventory and service booking
- ✓ • Improve accessibility and convenience for gardening needs

Secondary Objectives

- ✓ • Support local nurseries and gardening professionals
- ✓ • Promote eco-friendly and sustainable practices
- ✓ • Create a scalable gardening marketplace
- ✓ • Enable service scheduling and tracking

Non-Functional Requirements

- ✓ • Performance:
 - Page load time < 3 seconds;
 - supports concurrent bookings
- ✓ • Security:
 - Secure authentication and role-based access control
- ✓ • Usability:
 - Simple, intuitive, and mobile-first UI
- ✓ • Scalability:
 - Support multiple cities and vendors

Technology Stack (Suggested)

● Frontend

- HTML5, CSS3, JavaScript
- React.js / Next.js
- Bootstrap / Tailwind CSS

● Backend

- Node.js with Express.js

● APIs

- REST APIs for service requests, status updates, and notifications

● Database

- MongoDB / PostgreSQL

● Deployment

- AWS / Vercel / Netlify

Expected Impact

- Increased convenience for gardening enthusiasts
- Better reach for local nurseries and gardeners
- Improved service transparency and reliability
- Promotion of green living and sustainability

Future Enhancements

- Online payment & subscriptions
- Mobile application
- AI-based plant care recommendations
- Gardening tutorials and community forum
- Subscription-based plant delivery

Scope of Work

In-Scope

- Web-based responsive platform
- Online plant and product catalog
- Gardener service booking
- User, vendor, and admin dashboards

Out of Scope

- Native mobile applications
- International shipping
- Automated irrigation system integrations
- Advanced AI plant health diagnosis

Key Performance Indicators (KPIs)

- ✓ • Number of registered users
- ✓ • Number of listed products and services
- ✓ • Order conversion rate
- ✓ • Service booking completion rate
- ✓ • Vendor participation
- ✓ • Vendor participation

Assumptions & Constraints

Assumptions

- Vendors will provide accurate product information
- Users prefer online ordering and booking
- Reliable logistics for plant delivery

Constraints

- Limited geographic coverage initially
- Seasonal availability of plants
- Dependency on local service providers

Deliverables

- ✓ • Functional web application
- ✓ • Admin dashboard
- ✓ • PRD & technical documentation
- ✓ • Deployment-ready build
